Preface

When using this product, be sure to observe the following:

- Do not place containers with liquids (such as water cups) on the network hard disk video recorder.
- When cleaning the equipment, please unplug the power cord and cut off the power completely.
- Place the network hard disk video recorder in a well-ventilated place.
- Make the network hard disk video recorder work within the allowable temperature and humidity range.
- Dust on the circuit board of the network hard disk video recorder will cause a short circuit after being damp. Please use a soft brush to clean the circuit board, connectors, chassis and chassis fan regularly.
- Improper replacement of the battery may cause explosion hazard. It is not recommended that the user replace it directly; if it needs to be replaced, it can only be replaced with the same type or equivalent type of battery.
- When installing, be sure to turn off the power of all related equipment.
- After receiving the product, please open the packing box, take out the equipment, and confirm the packed products and accessories according to the packing list in the box.
- Please modify the user's default password in time after the device is controlled to avoid being stolen.
- Please keep the equipment installed horizontally, or install it in a stable place, and take care to prevent the product from falling.

NVRR Quick Operation Guide V3

The content in this specification is only to provide guidance for users. Our company will update the content of this specification according to the enhancement or change of product functions, and will regularly improve and update the software functions described in this specification. The updated content will be It is reflected in the new version of the specification without notice.

This manual is a general series of 9/16/32/36-channel equipment. For some functions, please refer to the product.

Product introduction

2.1 Product features

- Brand new UI interface, more intuitive and concise

- Support dual stream function.

- The video encoding parameters of each channel are independently adjustable, including resolution, frame rate, bit rate, image quality, image parameters, ISP parameters, etc. (requires front-end IPC support).

- Support composite stream and video stream encoding, audio and video synchronization during composite stream encoding.

- Support high-definition video output.

- Support human form detection and face capture function.

- Support timeline playback and smart playback.

2.2 Real-time monitoring function

- Support HDMI and VGA output at the same time.

- Support high-definition HDMI display, the highest resolution is 4K output; support high-definition VGA display, the highest resolution is 1920x1080P.

- Support multi-screen preview, screen binding channel movement

- Support video privacy masking.

2.3 Storage and backup

- The device supports up to 8T hard disk;

- According to the user's configuration and strategy, the corresponding audio and video data of the remote equipment transmitted through the network will be stored on the network hard disk video recorder;

- Support backup via USB interface (U disk/USB burner);

- Support remote backup via network;

- Support for clip backup during playback;

2.4 Other local functions

- Users can operate through the front panel buttons, mouse, etc.

- Three levels of authority user management, the administrator can create multiple operation users and set their authority, authority can be refined to the channel.

- Complete operation, alarm, abnormal and information log recording and retrieval.

- Support manual alarm triggering and clearing.

- Support the import/export operation of device configuration information

- Support ONVIF protocol, support third-party camera access.

- Can directly set front-end camera parameters.

- Support H.265/H.264.

2.5 Remote function

- Support remote monitoring, preview and backup using Easyvms client.

NVRR Quick Operation Guide V3

- Support remote monitoring, preview and backup using IOS/Android APP.

local basic operations

3.1 Mouse operation instructions

Note: If the mouse cannot be detected after it is connected, it is generally caused by the incompatibility of the mouse with the hard disk video recorder. Please replace the mouse.

3.2 Keyboard description

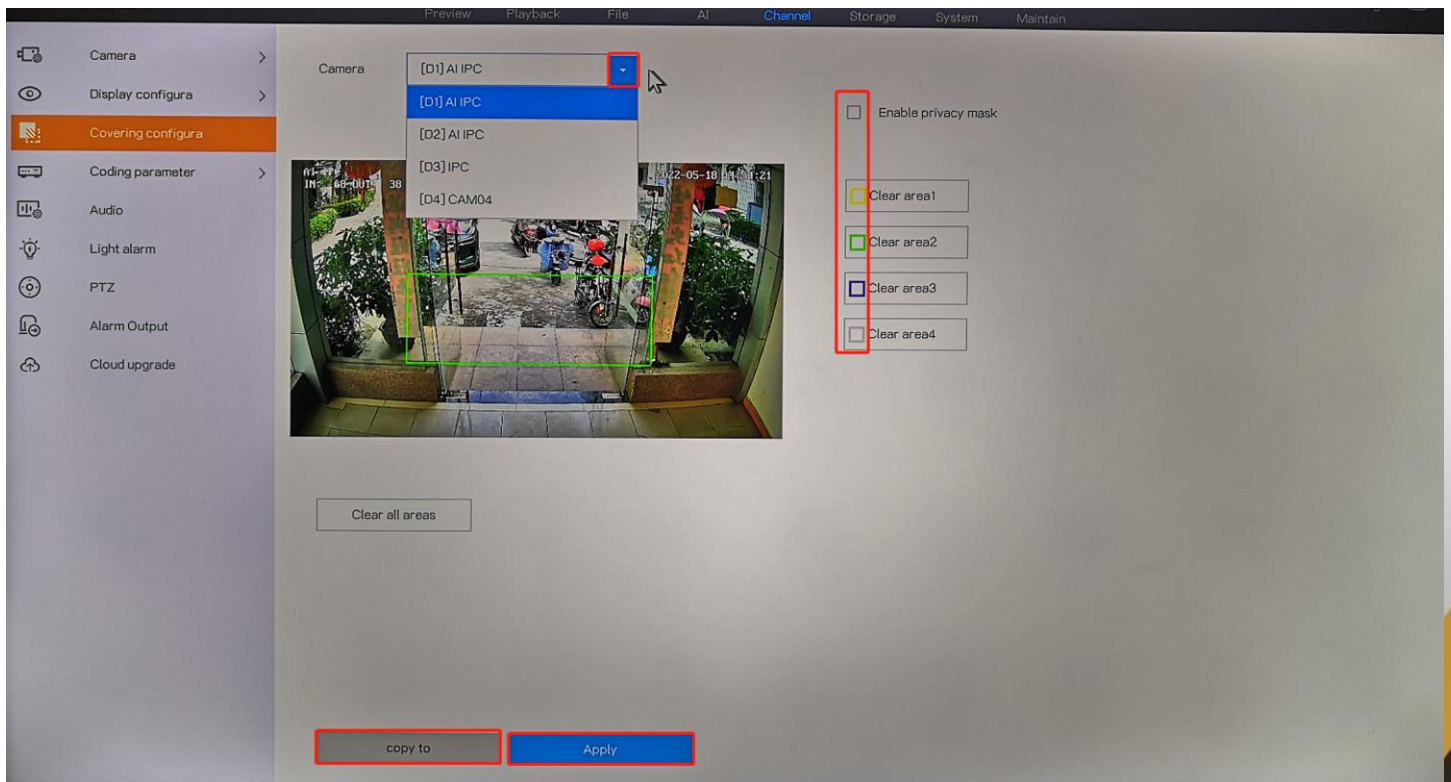

icon	Description
	Chinese and English switching
	Move the cursor while typing
	English case switch
	Turn off keyboard display
	Single delete the entered word

3.3 Interface icon description

Channel toolbar					
	Quick playback		Cloud platform control		Electronic amplification
	Open the voice		Channel information		Open the intercom
	Manual drawing		Clear the alarm		Camera information
The top information bar					
	Alarm information		P2P cloud state		Device shutdown
Bottom toolbar					
	Quick playback		Cloud platform control		Electronic amplification
	Open the voice		Channel information		Open the intercom

NVRR Quick Operation Guide V3

Picture	Date
	Drop-down box, with at least two options, and only one option is available
	Check box, whether to select this option
	Click to Save the current settings
	You can apply the channel settings to other channels

3.4 Turn on the device

Step 1. Connect the device to the display;

Step 2. Connect the device to a 12V power supply;

After the device is turned on, the boot screen will be displayed, and the boot will be successful after waiting for a period of time.

3.5 Boot wizard

The steps to start the wizard function when you turn on the opportunity are as follows: click Exit to exit the wizard page directly

3.5.1 Setting the time, you can set the time format and system date.

NVRR Quick Operation Guide V3

User guide

NVRR Quick Operation Guide V3

After selecting the device and clicking Add, the login connection interface appears. Enter the login account and password of the camera, and then click OK.

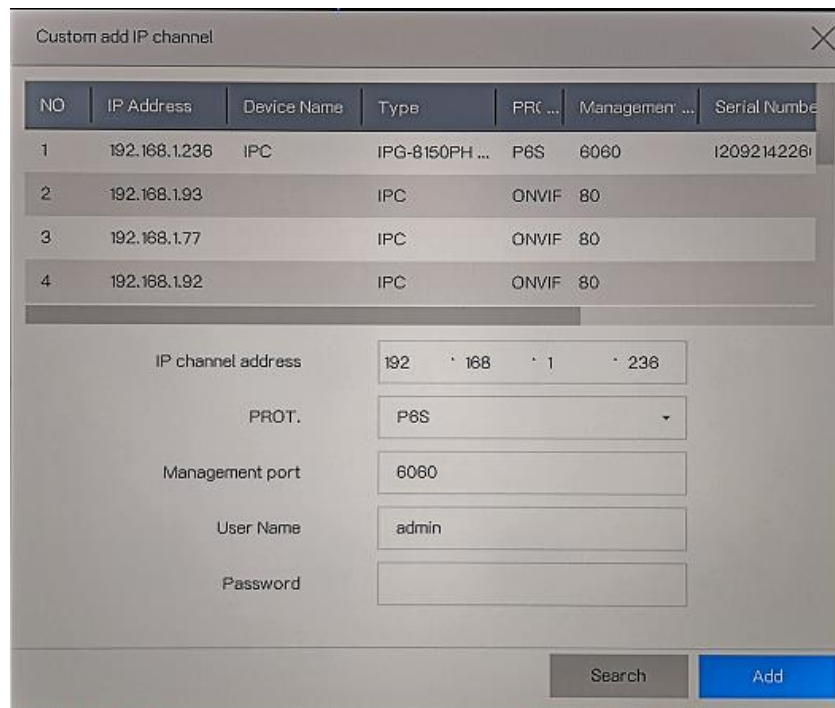

Note: Click the edit button  You can modify the IP address of the camera.

The 'Login and Connect' dialog box contains two input fields: 'User Name' with the value 'admin' and an empty 'Password' field. At the bottom right, there are two buttons: 'OK' (highlighted in blue) and 'Cancel'.

3.6.2 Custom add

Method 1: Click the [Custom Add] button and enter the corresponding IP address, account number, and password

The 'Custom add IP channel' dialog box features a table with the following data:

NO	IP Address	Device Name	Type	PRC ...	Managemen' ...	Serial Number
1	192.168.1.236	IPC	IPG-B150PH ...	P6S	6060	I209214226i
2	192.168.1.93		IPC	ONVIF	80	
3	192.168.1.77		IPC	ONVIF	80	
4	192.168.1.92		IPC	ONVIF	80	

Below the table, there are input fields for: IP channel address (192.168.1.236), PROT. (P6S), Management port (6060), User Name (admin), and Password. At the bottom right, there are 'Search' and 'Add' buttons.

3.6.3 Preview page added

Click the channel that has not added a camera, there will be a [+] sign in the middle, click to enter the add page.

3.6.4 Preview page status

After the device is added, you can preview it:

If the camera password or camera information is incorrect, a network disconnection prompt will appear (the CAM05, CAM06, CAM07, and CAM08 channels as shown in the figure below).

The normal camera will display the screen, if there is a hard disk installed, the blue camera icon will be displayed in the upper right corner  Indicates that it is recording (channel CAM01 as shown in the figure below).

Displaying NVR means that no camera has been added to the channel (CAM02, CAM03, CAM04, and CAM09 channels as shown in the figure below).

NVRR Quick Operation Guide V3

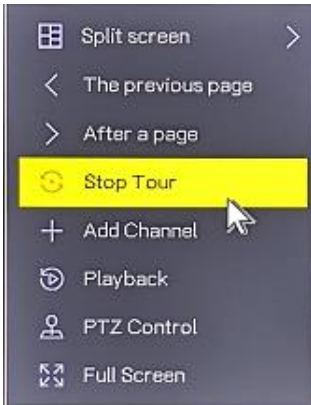

3.7 Target detection instructions

Access to the IPC that supports AI functions, the corresponding intelligent event can be retrieved, and the event can be played back.

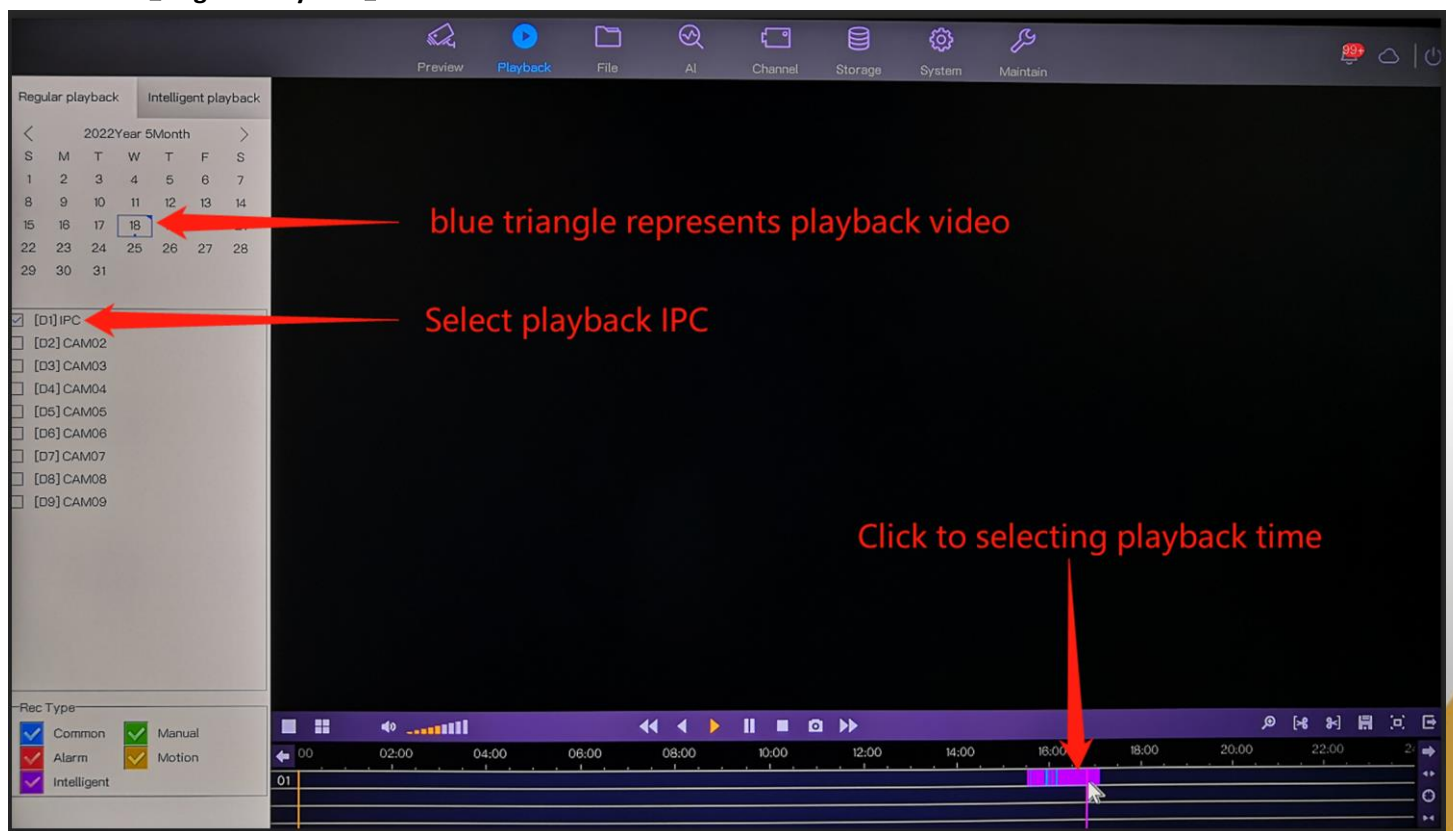

Note: It can be used only when it needs to be connected to an IPC device that supports human faces.

3.8 Local playback

Right-click on the preview interface will pop up a right-click menu, or the playback button at the top of the interface

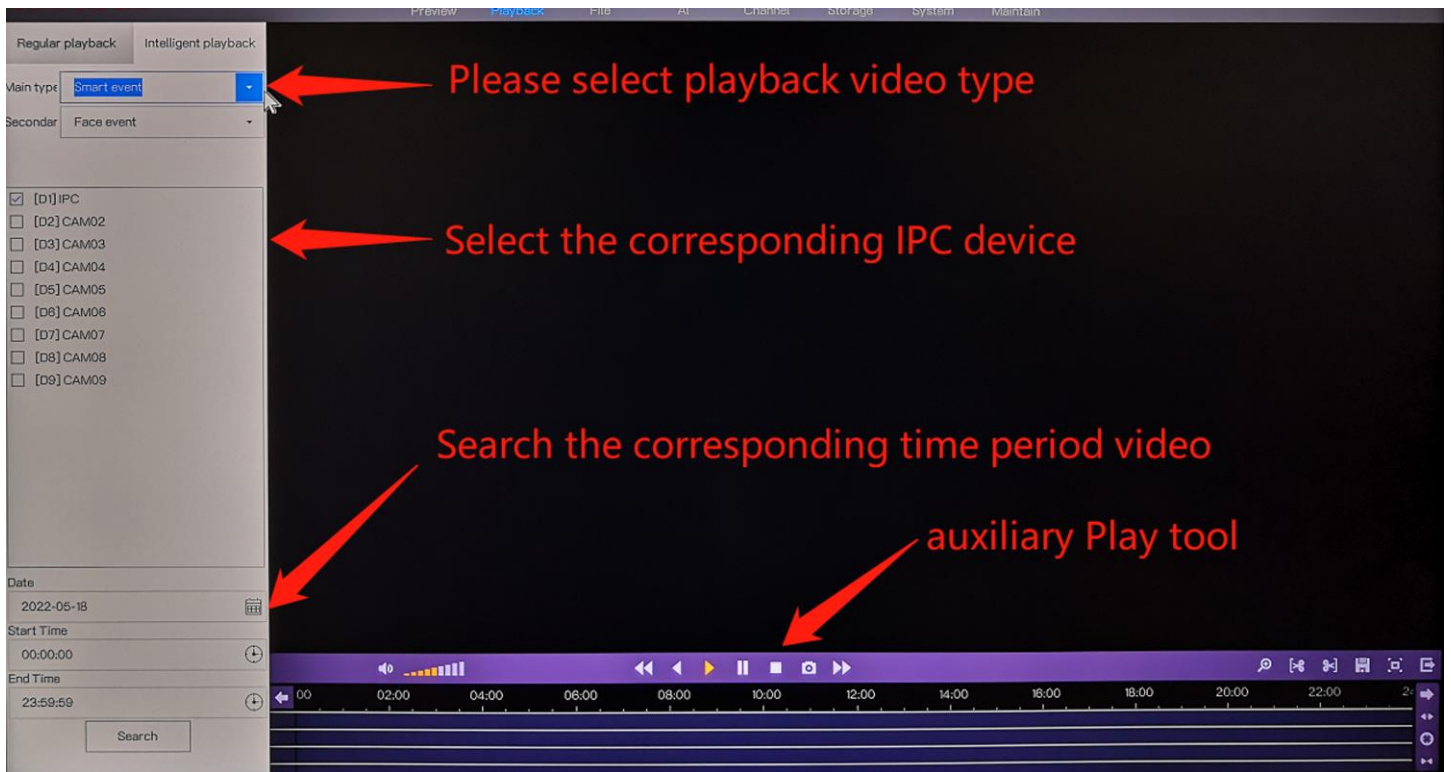

3.8.1 【Regular Playback】 Mode

3.8.2 【Intelligent Playback】 mode

NVRR Quick Operation Guide V3

Button description:

Button	Description	Button	Description
	Single screen / Quad screen		Start/stop cutting
	Rewind/Pause		Forward/pause
	Replay at slower speed in playback mode, and rewind in one second in pause mode		Accelerate playback in the playback state, pause the loading of a single frame to advance
	Electronic amplification		full screen
	Timeline zoomed out		Timeline zoom
	Restore the default timeline		Video backup
	Timeline left		Time axis shift right

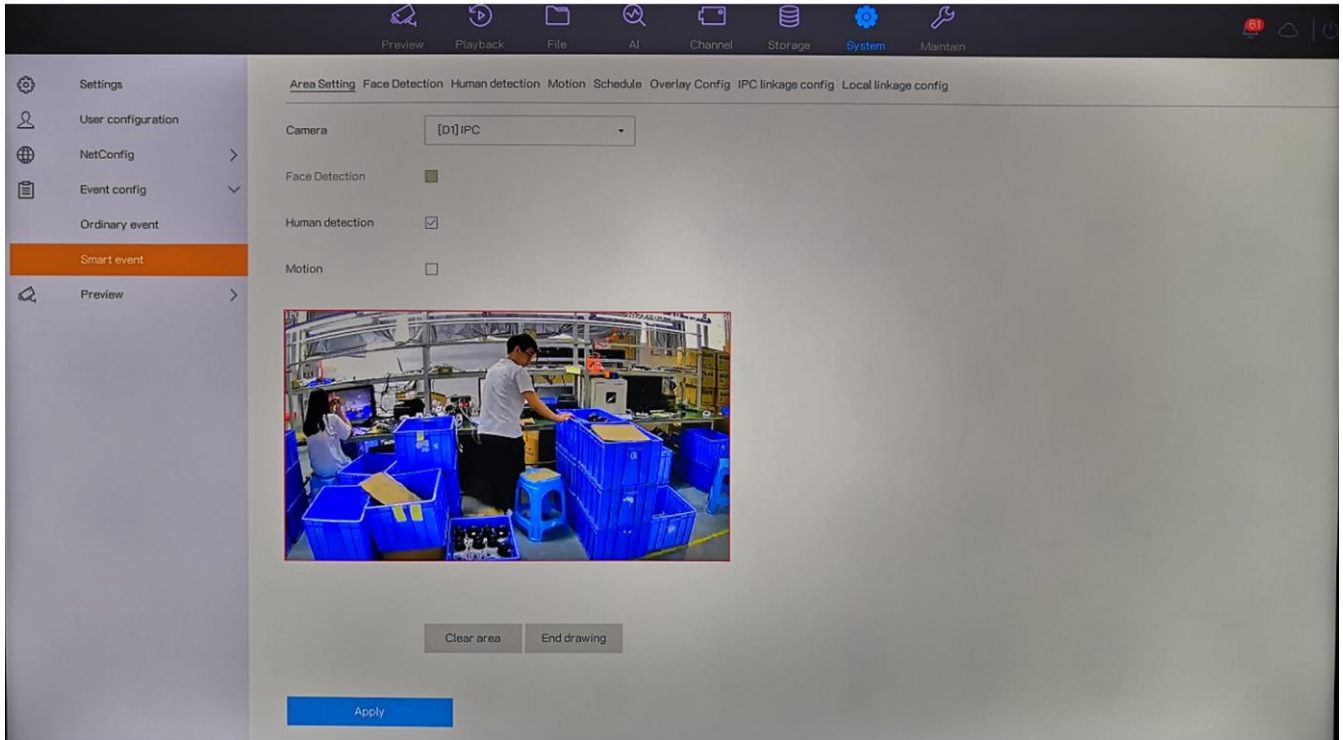

NVRR Quick Operation Guide V3

			Exit the playback interface
--	--	--	-----------------------------

3.9 Smart event settings

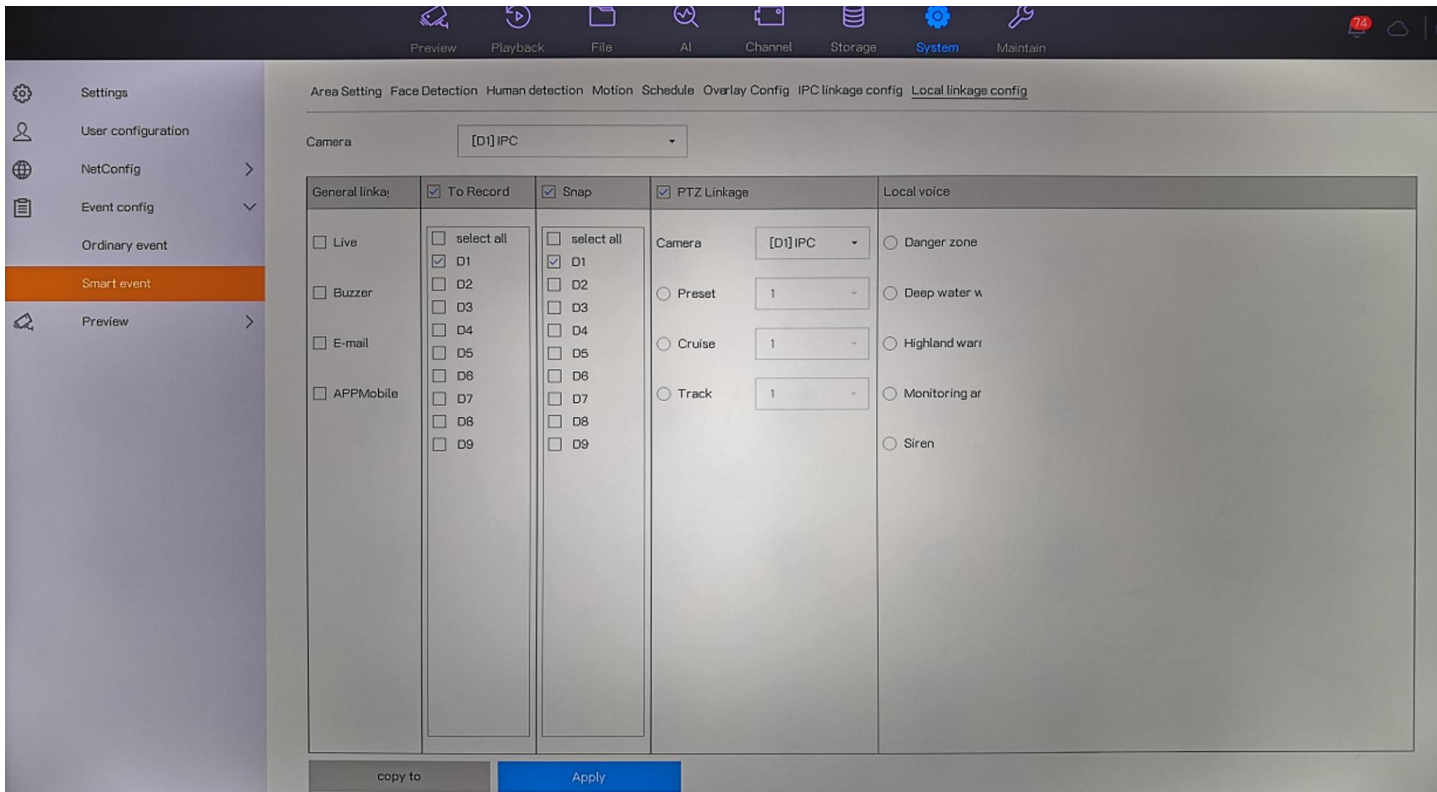

Connect NVR to an IPC device (face or human figure) that supports AI intelligence, click on the top [System Management] → [Event Configuration] → [Smart Event]

In [Regional Settings], check the figure/face (supported by IPC device)

In [Local Linkage Configuration], you can link the NVR to perform corresponding operations, such as PTZ, big screen, mail, push, local voice and other functions

NVRR Quick Operation Guide V3

Note: It can be used only if it needs to be connected to the IPC that supports humanoid equipment.

WEB access

4.1 LAN WEB access

After the device is connected to the network, enter the IP address of the device in the address bar of the browser to realize WEB access.

Step 1 Open Internet Explorer.

Step 2 In the address bar of the browser, enter the IP address of the device: http://IP address.

Step 3 The login interface appears in the browser, enter the correct user name and password.

Step 4 Click "Login" to enter the preview interface.

Install ActiveX

NVRR Quick Operation Guide V3

After logging in, you can perform preview, playback, configuration and log query functions

Note:

If the device's HTTP port changes (the default is 80), please enter `http://IP:HTTP port` in the address bar, for example: `192.168.1.9:81`

You need to download the plug-in for the first visit. Click the [Install Control] option in the login window to download and install (red box location).

APP

5.1 APP download

Use your browser to scan the QR code to download.

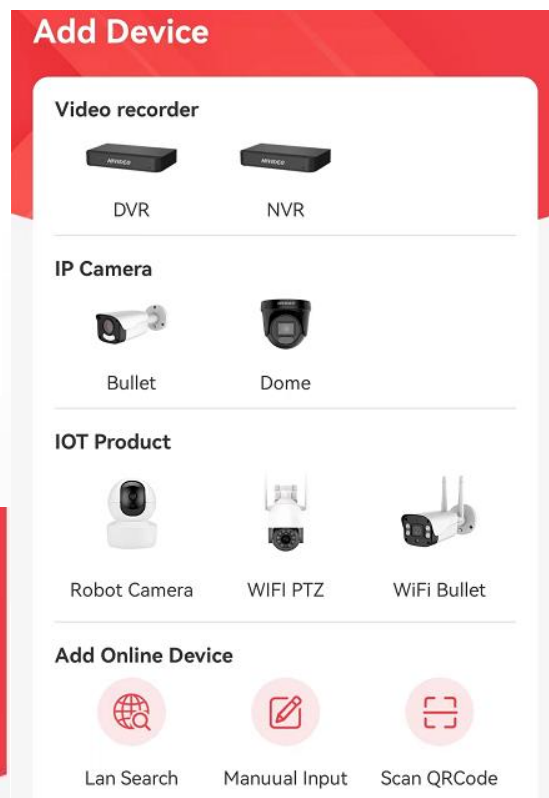

Note: The P2P status on the device must be displayed as a cloud service online before you can use the APP to watch remotely.

Click the cloud service button in the upper right corner of the recorder, Show that the cloud service is online for remote viewing

5.2 Add and preview devices

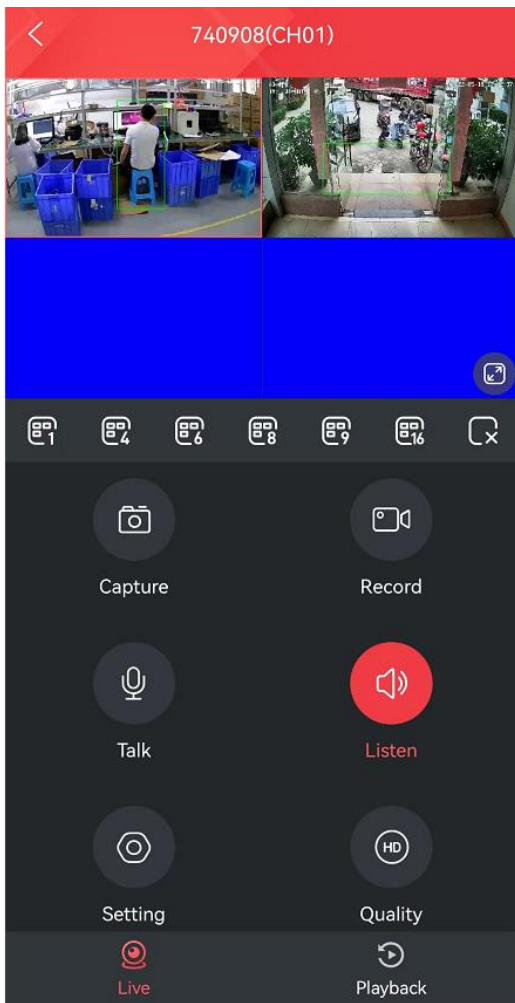

Add device: Open APP, click NVR picture and add device.

1. There are two ways to enter the add device interface to add NVR
2. 1. Scan code to add: Click the cloud service button in the upper right corner, and use the app to scan the QR code formed by the DID on the left.
3. Manually add: Select [System Management] → [Network Configuration] → [Advanced Configuration] above, and manually enter the sequence of DID display.

After adding, click to enter the preview page:

NVRR Quick Operation Guide V3

Video: Click the channel and then click this button to record video.

Intercom: Used for intercom between the device and the APP.

PTZ: You can control the camera to rotate up and down, left and right.

Take photo: Click the channel and then click this button to capture the photo.

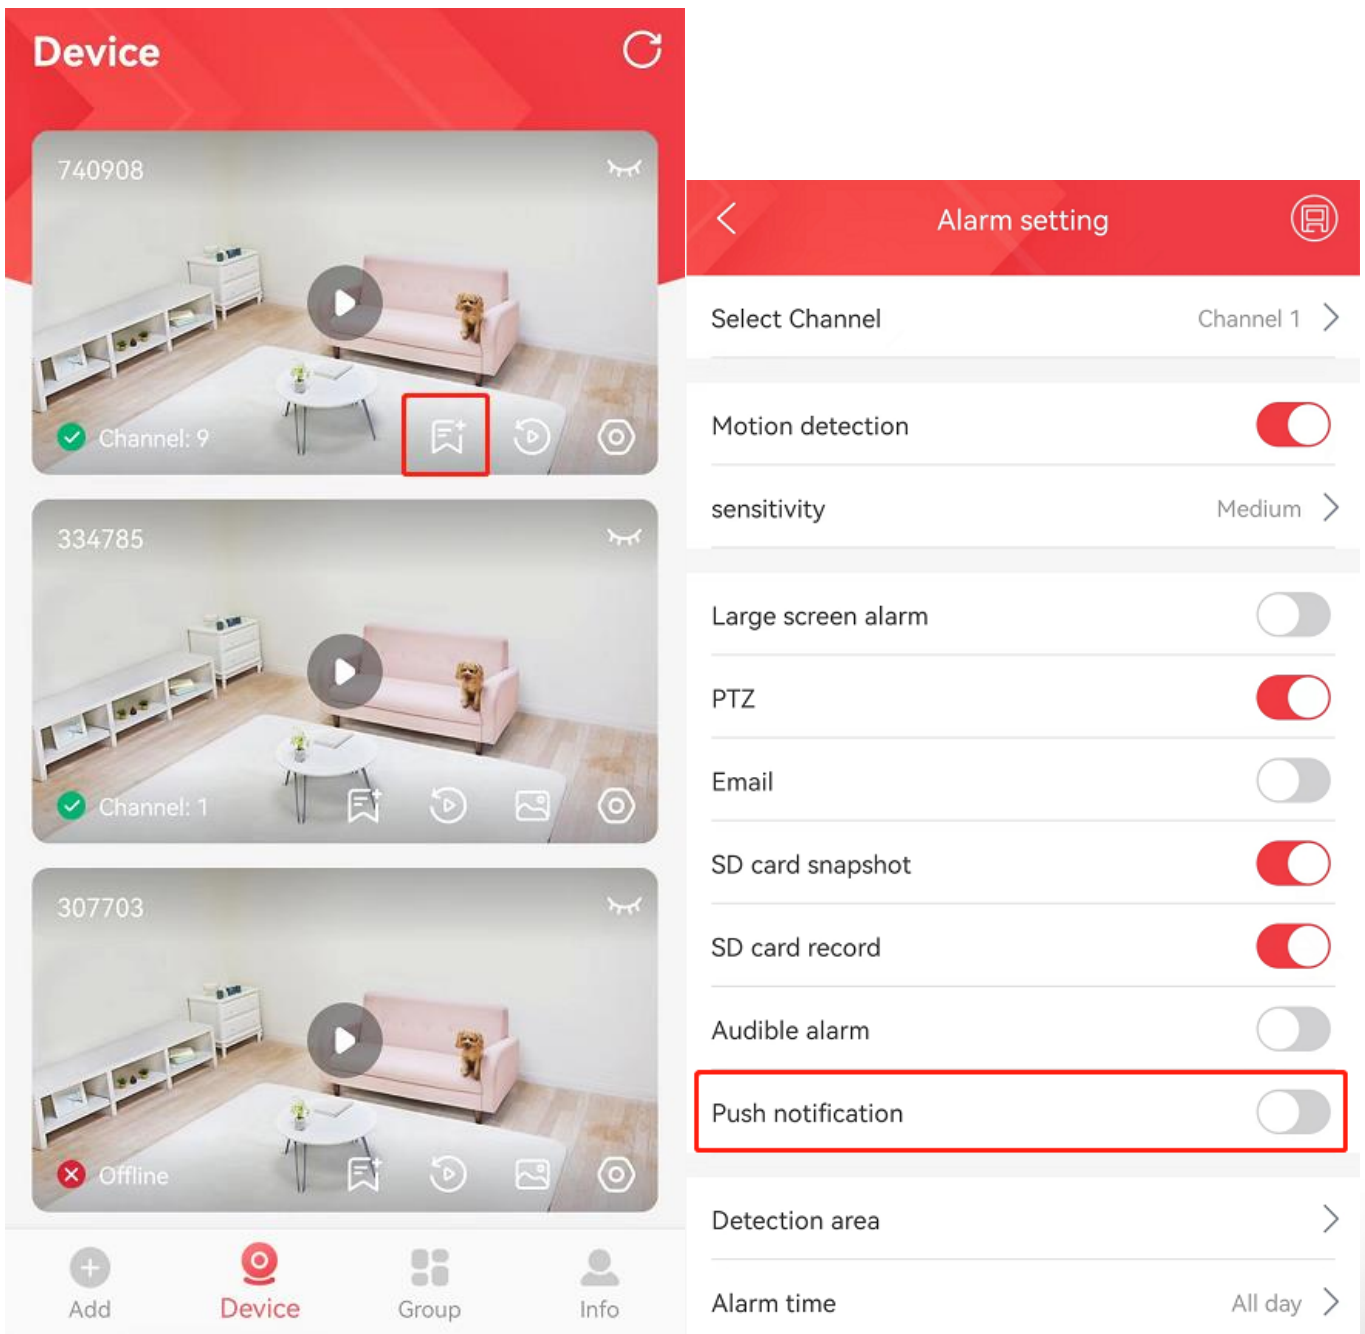

Picture quality: The preview picture quality of the switchable channel is clear and high-definition.

Sound: Used to turn on and off the audio of the monitoring device.

Note: If you are a multi-channel device, slide left and right on this preview interface to view more real-time IPC images.

After open the APP, please get into :Setting- Alarm Settings- Select channel- Turn on motion detection- This area enables push function. After the device triggers alarm, APP can receive alarm push.

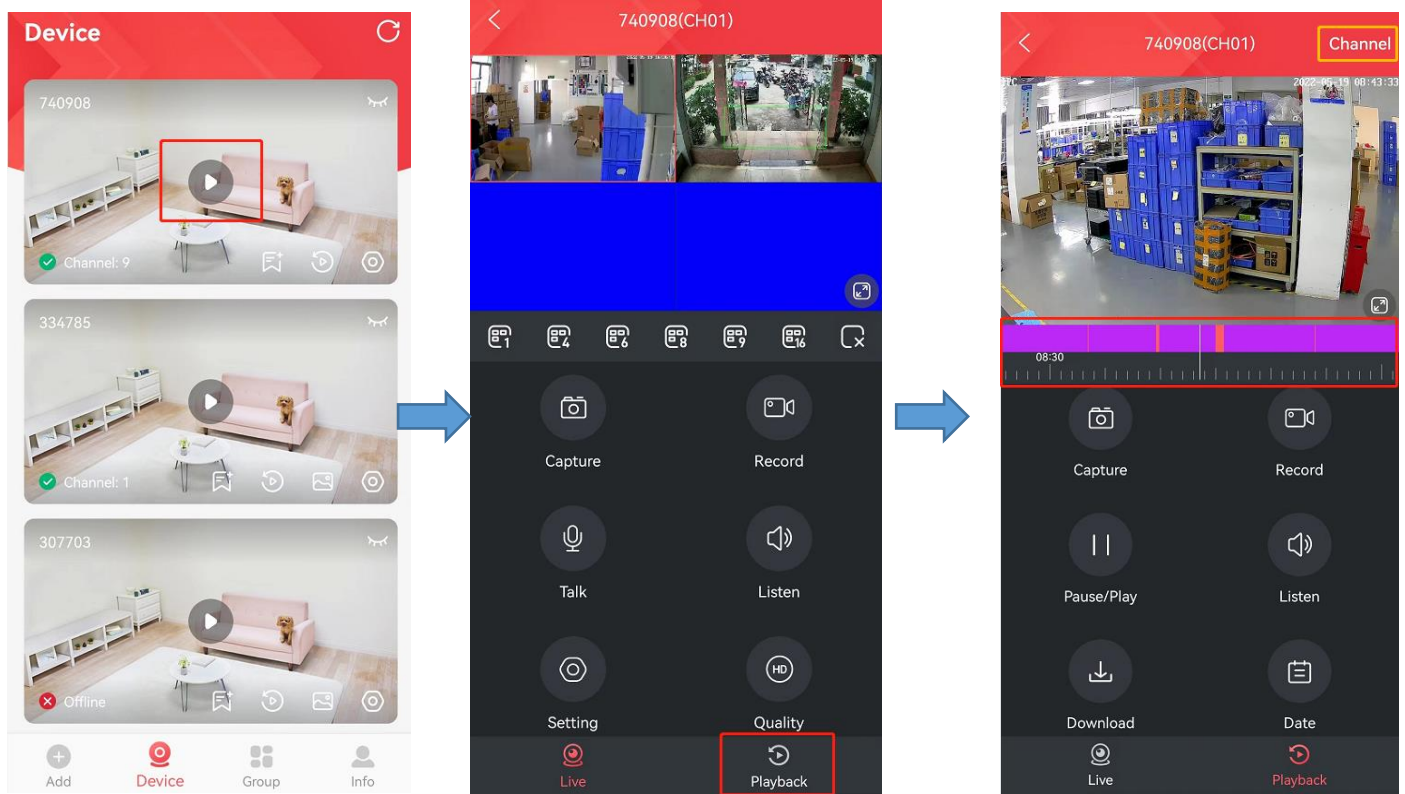

5.3 Turn on push alarm

5.4 Remote playback video

Click the play button on the preview interface → enter the real-time preview screen → click playback to switch to the playback page. After the channel is selected, playback can be performed, and the playback can be positioned by dragging the time axis.
